

## intro

Tuesday, April 29, 2025 1:09 PM

Cascading style sheets

styling websites

Sometimes  
written  
from  
scratchquite often  
reusedinline → `<tag style="..."`  
pain to find + not reusableinternal → `<style>... </style>`  
easy to find ✓ reusable? only 2 pagesexternal → `<link rel="stylesheet"`  
href = "..."

>  
 reusable ✓  
 → multiple elements

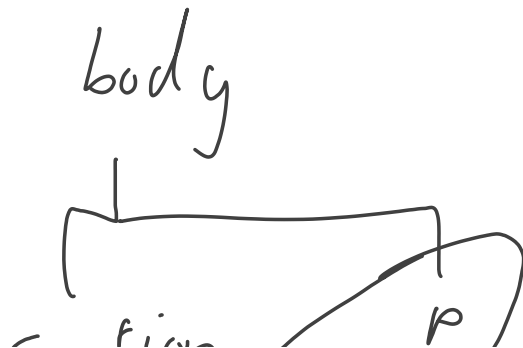

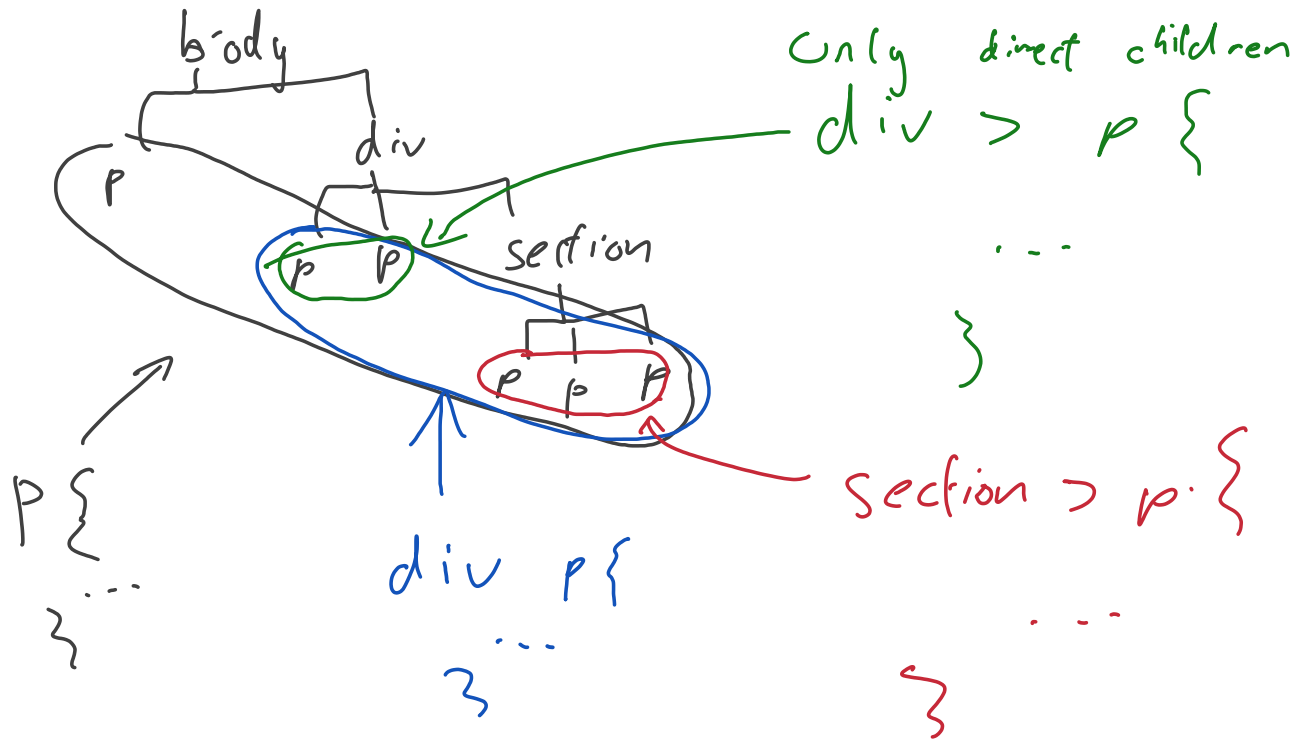

→ multiple pages  
little harder to find  
than internal

Rules

selectors → what gets styled  
{  
  property: value;  
}  
  ↑  
styling

Class → group of  
elements  
with the same  
styling

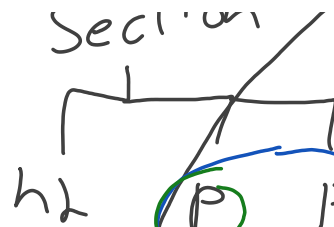

specificity  
id > class > tag

~ tida

p { ... }

h2 ~ p { ... }

para's NEXT to  
headings  
any sibling

para DIRECTLY  
next to a heading

first sibling
